

BPA Fast Facts

Unless otherwise noted, information is for fiscal year 2004.

Profile

The Bonneville Power Administration is a federal agency, under the U.S. Department of Energy, that markets wholesale electrical power and operates and markets transmission services in the Pacific Northwest. The power comes from 31 federal hydro projects, one nonfederal nuclear plant and several other small nonfederal power plants. The hydro projects and the electrical system are known as the Federal Columbia River Power System. About 40 percent of the electric power used in the Northwest comes from BPA. BPA's transmission system accounts for about three-fourths of the region's high-voltage grid, and includes major transmission links with other regions.

BPA is a self-financed agency, which pays for its costs through power and transmission sales. Both power and transmission are sold at cost, and BPA repays any borrowing from the U.S. Treasury with interest.

BPA's customers include publicly owned and investor-owned utilities, as well as some large industries. BPA also sells or exchanges power with utilities in Canada and the western United States.

Revenues BPA earns help it fulfill public responsibilities that include low-cost and reliable power and investments in energy conservation and renewable resources. BPA also funds the region's efforts to protect and rebuild fish and wildlife populations in the Columbia River Basin.

General Information

BPA established	1937
Service area size (square miles)	300,000
Pacific Northwest population	11,569,817
Transmission line (circuit miles)	15,342
BPA-owned substations	238
Employees (FTE)	3,165

BPA service area

Oregon, Washington, Idaho, western Montana and small portions of Wyoming, Nevada, Utah, California and eastern Montana.

Other facts

- About 70 percent of the power BPA sells is hydroelectric.
- BPA owns and operates more than three-fourths of the high-voltage transmission grid in the Pacific Northwest.
- BPA has spent more than \$7 billion to support Northwest fish and wildlife recovery which includes more than \$3.5 billion in energy purchases and loss of energy sales due to fish operations.
- Since 1981, BPA has saved over 800 average megawatts of energy through its energy conservation programs.

BPA Rates

Wholesale power rates ^{1/} (10/1/04-3/31/05)

Average Priority Firm (shaped, undelivered)	2.96 cents/kWh
Average Priority Firm (flat, undelivered)	2.62 cents/kWh
Residential Load (flat, undelivered)	2.62 cents/kWh
Priority Firm Exchange (flat, undelivered)	2.62 cents/kWh

^{1/} Shaped and flat products are different. For a shaped product, BPA provides power to meet the moment-to-moment variability in load within the BPA customer's system. For a flat product, or block, there is no variation in the amount of power BPA provides to the customer. These rates do not include the cost of transmission.

Transmission rates ^{2/} (FYs 2004-2005)

Network rates:	
Firm	\$15.132/kW/yr
Nonfirm	.363 cents/kWh
Southern Intertie rates:	
Firm	\$16.908/kW/yr
Nonfirm	.406 cents/kWh

^{2/} Includes the rates for point-to-point transmission service plus the two required ancillary services. All short-term firm and nonfirm rates are downwardly flexible.

2004 Financial Highlights

For the Federal Columbia River Power System (\$ in thousands)

Total operating revenues	\$3,197,914
Total operating expenses	2,408,645
Net operating revenues	789,266
Net interest expense	284,851
Net revenues	\$ 504,415

SFAS 133 mark-to-market gain	\$ (89,452)
Nonfederal debt management actions	(348,636)
Modified net revenues	\$ 66,327 ^{3/}

^{3/} Management has determined that modified net revenues are a better representation of the outcomes of normal operations during periods of debt management actions and fluctuations in derivative market prices. See BPA's 2004 Annual Report for more information.

^{9/} Forecast figures from BPA's 2003 Pacific Northwest Loads & Resources Study. The values listed have been reduced to take into account capacity and energy adjustments. Capacity adjustments include forced outage reserves, spinning reserves, hydro maintenance and transmission loss reductions. Energy adjustments include hydro maintenance and transmission losses reductions.

BPA Vision

BPA will be an engine of the Northwest's economic prosperity and environmental sustainability. BPA's actions advance a Northwest power system that is a national leader in providing:

- High reliability;
- Low rates consistent with sound business principles;
- Responsible environmental stewardship; and
- Accountability to the region.

We deliver on these public responsibilities^{10/} through a commercially successful business.

^{10/} Our public responsibilities are defined by the four characteristics listed above.

BPA Mission

The Bonneville Power Administration's mission as a public service organization is to create and deliver the best value for our customers and constituents as we act in concert with others to assure the Pacific Northwest:

- An adequate, efficient, economical and reliable power supply;
- A transmission system that is adequate to the task of integrating and transmitting power from federal and non-federal generating units, providing service to BPA's customers, providing interregional interconnections, and maintaining electrical reliability and stability; and
- Mitigation of the Federal Columbia River Power System's impacts on fish and wildlife.

BPA is committed to cost-based rates and public and regional preference in its marketing of power. BPA will set its rates as low as possible consistent with sound business principles and the full recovery of all of its costs, including timely repayment of the federal investment in the system.
