Indiana Utility Regulatory Commission

William G. Divine Administrative Law Judge

Electric Service Area Boundaries April 19, 2006

Required that Indiana be divided into designated geographic areas, and within each geographic area only one electricity supplier would have the right to furnish retail electric service to the public.

Reasons for Legislation:

- To encourage the orderly development of statewide electric service
- To avoid unnecessary duplication of electric facilities
- To prevent waste of material and resources
 To promote economical, efficient, and adequate service to the public

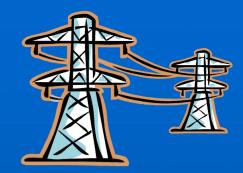

IURC adopts uniform procedures for establishing electric service area boundaries:

U.S.G.S. Mylar Facet Maps
Electricity Suppliers Must Negotiate
IURC Hearings

Once established, there were two primary ways to change assigned service area boundaries:
Mutual Agreement
Annexation (municipality pays value of electric facilities + severance damages)

To change a municipality's assigned service area following an annexation, the IURC must consider the following:

- Preference of property owners
- Ability of municipally owned electric utility to render service
- Other utilities to be provided in the annexed area by the municipality
- Proximity and capability of service repair facilities of the electricity suppliers involved
 Preference of local government officials

2002 Legislation

Expedites processes to change service area boundaries for both

Annexation andMutual Agreement

2002 Legislation

Mutual Agreement –

• Publish notice of petition for boundary change and, if no objection within 20 days, no hearing required.

Annexation –

- File certified copy of annexation ordinance within 60 days of effective date of ordinance.
- No hearing required.
- Payments by municipality still required.

Conversion from Mylar Maps to Geographic Information System (GIS) for Recording Service Area Boundaries
