Commissioners

EARLY PROGRAMS AND CREATION OF EFFICIENCY VERMONT

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Reminder - Vermont Regulatory Structure

- Independent state agency modeled on a court
 - Not part of the State Elected Legislature
 - Not part of Governor's Administration
- Quasi-judicial
 - Supervises rates, quality of service, overall management of utilities

- Public “Ratepayer” Advocate
- Planning, Consumer Affairs
- Part of Administration

USAID
FROM THE AMERICAN PEOPLE

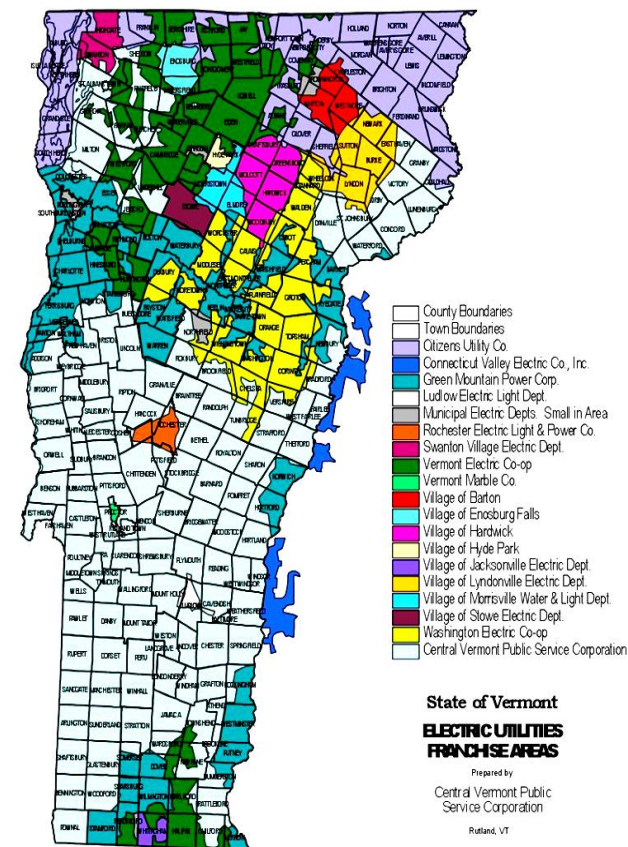

National
Association of
Regulatory
Utility
Commissioners

Early Public Service Board findings on Efficiency

- 1990, Board issued an Order finding:
 - EE programs could meet a significant portion of present and future demand
 - Distribution utilities needed to treat equivalently to supply options
 - Energy efficiency programs that existed could be improved
 - Comprehensive programs were needed
- Solution: Least-cost Integrated Resource Planning (IRP)

IRP essential step, but not as effective as it could be

- 22 distribution utilities (now 17) delivering different programs with their own personnel
- Marketplace confusion
- Uneven Performance
- Declining Spending
- Perceived Conflicts of Mission
- Regulatory burden and cost

USAID

Association of
Regulatory
Utility
Commissioners

Creation of an “Energy Efficiency Utility”

- 2000, “Statewide” entity created as a result of:
 - Legislative action authorizing structure and “Energy Efficiency Charge”
 - a Settlement agreement between
 - Public Service Department,
 - Utilities,
 - Industry, and
 - Environmental stakeholders
 - Board Order approving Settlement

Efficiency Vermont

Association of
Regulatory
Utility
Commissioners

Major Change from Utility Delivered Programs to Contract

- Statewide delivery of programs
 - Fulfills electric utilities' obligations to implement system wide electric efficiency as part of least cost portfolio
 - Uniformity of program structure, incentives
 - Statewide costs used for cost-effectiveness screening
- Single Delivery Entity*
 - **Contractor** to Public Service Board – NOT franchised
 - Retained through open solicitation process
 - Burlington Electric Department – performance and funding allowed it to continue

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Exemptions to Efficiency Programs

- Certain large customers who have shown sustained commitment to EE
- Certain customers who may qualify to “self-administer” (fund EE improvements on their own and be subject to reporting and other requirements)
- Continue to fund EE programs associated with system benefits

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Funding

- The Energy Efficiency Utilities are funded by the “Energy Efficiency Charge” (EEC)
 - Volumetric wires charge that is stated separately on customer’s bills
 - Statewide kW and kWh charge that differs by customer class depending on revenues generated from that class
 - Annual true up for under- or over-collections
 - Provides assurance that important services such as efficiency are delivered

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

What about Financing of efficiency?

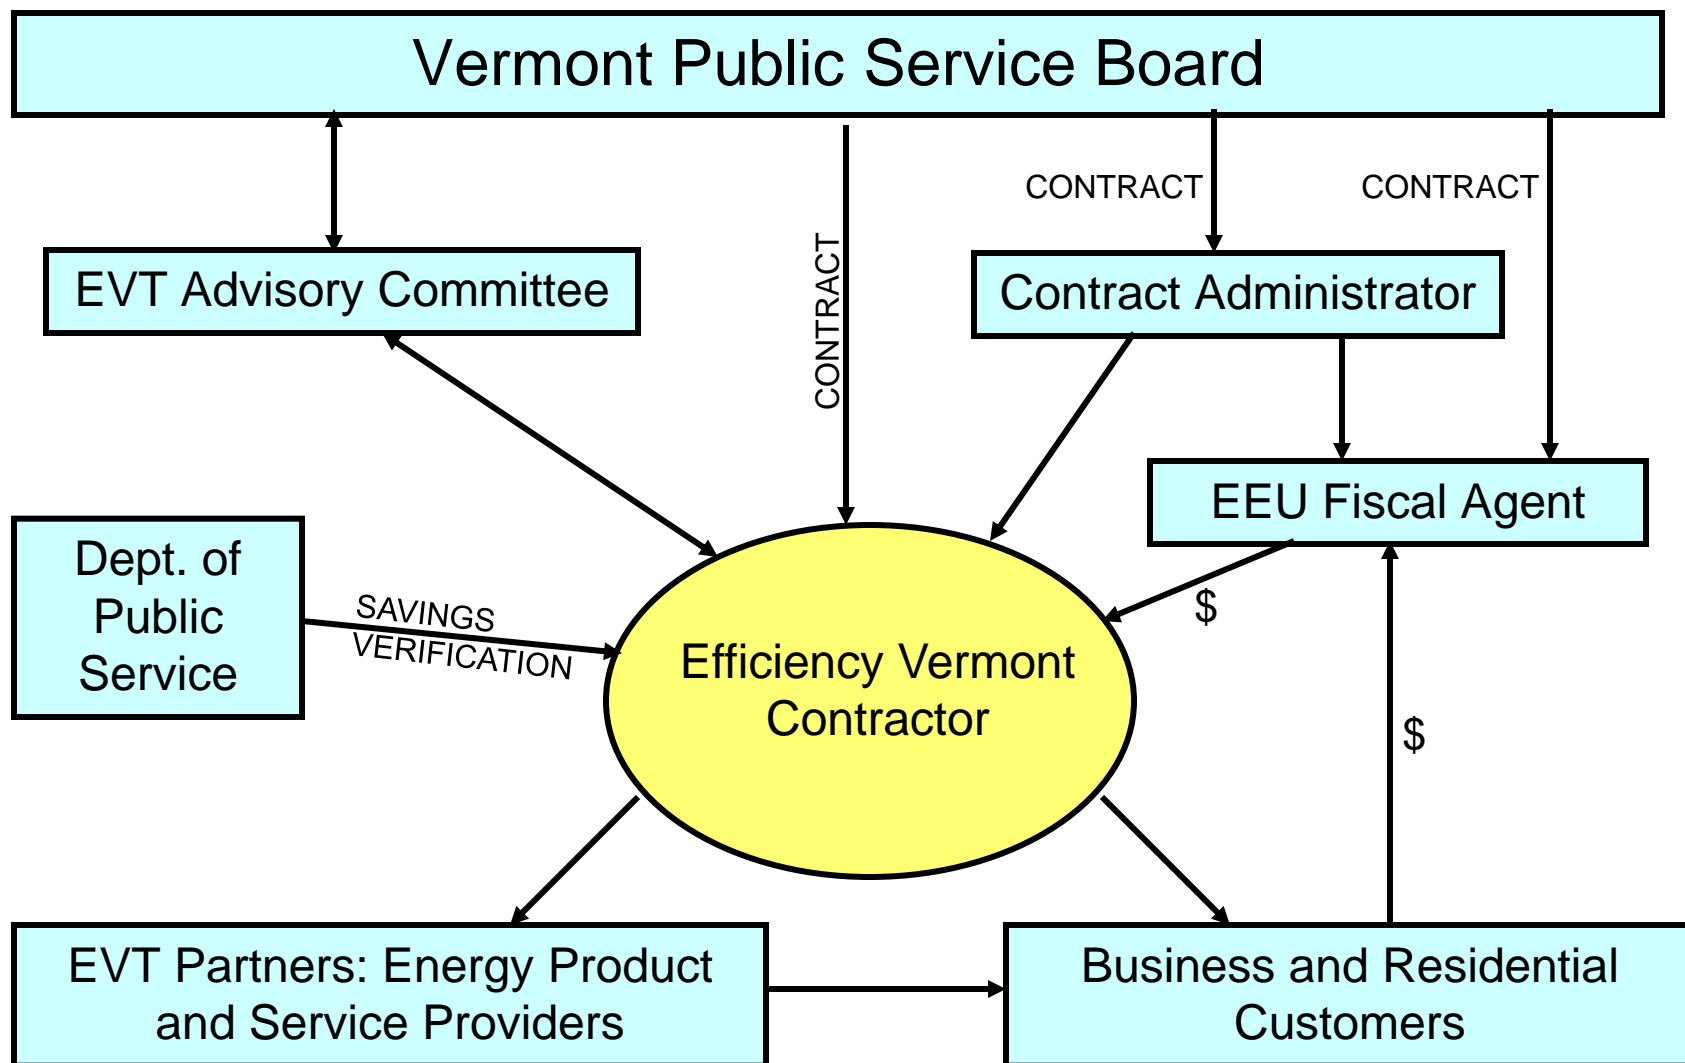

- Systems benefit charge pays for EE in year one; benefits accrue over time
- Another option is to use bonds or other financing mechanism to pay for EE
- More costly – paying carrying costs
- Could be appropriate for short term burst in funding rather than a long-term source

Commissioners

Roles of Public Service Board Contractors

- **Efficiency Vermont Performance Contract Model**
 - Acquisition of maximum cost-effective statewide resources through design, propose, deliver EE services
 - Targeted demand reduction to avoid or defer T&D system investment
 - Leverage maximum “Total Resource Benefits”
 - Market Transformation
- **Contract Administrator**
 - Oversee contract with Efficiency Vermont; resolve disputes
- **Fiscal Agent**
 - Collect and disburse Energy Efficiency Charge Funds

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Public Service Board Role - Contract Structure

- Solicits and contracts with a contractor to deliver programs
- Establishes total EEU program budget and sets rates
- Approves Annual Plans
- Resolves Disputes

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Dept of Public Service Role – Contract Structure

- Propose new programs and changes to new programs
- Evaluate programs, verifies savings claims
- Estimates available energy efficiency potential

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Other Entities – Contract Structure

- Electric Utilities
 - Must Provide data and information to contractor (confidentiality agreements in place)
 - Continue to retain an obligation to deliver EE to address constraints
- Advisory Committee
 - Representatives of all stakeholder groups, appointed by Board
 - Provides advice to Efficiency Vermont
 - Purely advisory

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

The Basic Mechanism - A Contract to Supply Energy Efficiency Resources

- Model Similar to a power supply contract
- Kwh and peak kW are “purchased” from the Efficiency Vermont Contractor
- Efficiency Vermont was a competitively bid, 3 year performance contract that included:
 - Minimum performance requirements
 - Measureable performance indicators
 - A significant financial holdback to assure contractor performance

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Contract for RESULTS

- Performance mechanism are an excellent tool to focus contractor attention on policy goals
 - Specific performance measures were negotiated between PSB and contractor at beginning of contract
 - Minimum performance standards to ensure certain markets are addressed
- Well-designed performance indicators are easier to administer than a detailed budget
- A portion of contractor's pay is tied to achieving the performance goals
 - Set percentage of total holdback is assigned to each performance standard; indicates relative importance of competing goals

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Contract Savings Verification and Audit

- Critical to ensure confidence in results
- Data system and Program Administrator Quality Assurance systems are critical
- Established, documented processes for savings assumptions and calculations
 - Technical Advisory Group → Technical Reference Manual
- Monthly Invoice Review
- Independent Financial Audit

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Contract Structure Challenges

- Incentive to contractor not structured for long-term planning
- Long term power supply commitments were riskier (Forward Capacity Market participation)
- Ability to enter into long term partnerships with market participants limited
- Financing/bonding capabilities limited
- Board Role as Contract Manager and Regulator was awkward
- Contractor became a *de facto* monopoly

Association of
Regulatory
Utility
Commissioners

“Making a good thing better”

THE REGULATED EFFICIENCY UTILITY MODEL

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

“Order of Appointment” Structure

- Provides for 12 year “Appointment” with opportunity for renewal after 6 years
 - 6 year Comprehensive Performance Assessment
 - 3 year Performance Incentive Periods
- Avoids end of contract issues
- Enhances Procedural Transparency, Administrator Accountability
- Keeps regulators in judicial role/advocate as evaluator
- Allows for long-term budget and savings goals
- Removes Contract Administrator and formal Advisory Committee

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Two Governing Documents (1)

- Process and Administration of an Order of Appointment
 - Legal Mechanism, EE Charge, General Funding Process
 - “Demand Resources Plan” – Process for Budgeting and Targets; EM&V
 - Rules for Re-Consideration of Appointment
 - Rules for Compensation and Payment; Performance Structure and “Non-Resource Acquisition”
 - Administrative Requirements – Data, Management Systems, Dispute Resolution Processes, Reporting

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Two Governing Documents (2)

- Order of Appointment for each Utility
 - Specific Responsibilities as an EEU
 - Specific Compensation Details – Actual Targets and Monetary Rewards

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Appointment – Additional Performance Mechanisms

- Failure of appointee to meet minimum thresholds on quantifiable performance indicators triggers reconsideration of appointment
- Scheduled regulatory reviews of the choice of appointee at six and twelve years
- Any party can ask regulators to open a proceeding at any time, for cause, to reconsider choice of the appointee

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Principles Applicable to Both Structures

- Accountability and Oversight
- Administrator Effectiveness
- Compatibility with Public Policy Goals
- Effective and Efficient use of Ratepayer dollars

ALTERNATIVE REGULATION

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

What is “alternative regulation”?

- Attempt to better align regulatory structure to better meet legislative policy goals
- Authorized to consider other avenues besides traditional “cost of service” regulation

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Why “Alternative Regulation”?

- Because of the successful Electric EE Structure in VT, Electric Alternative Regulation was not directly aimed at “decoupling”
- However, utility maintains the ability to influence individual customers
 - Direct contacts & referrals to program administrator
 - Aggressiveness in promoting Distributed Generation
 - Support of Building Codes
 - Provision of timely, useful information on energy efficiency

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

What does “Alt Reg” do?

- Reduces the link between profitability and sales
 - Removes disincentive to reduce sales
 - Does not expose Utility to “unacceptable” risk nor overcharge customers as sales volume decreases
- Offers ability to provide incentives for innovations and improved performance that advance energy policy
- More efficient regulatory process
- Implemented through 3 core mechanisms

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

1) Annual Base Rate Adjustments

- Captures any increased sales – recalibrates billing determinants
- If increased sales = increased earnings, then this is mitigated by the Earnings Sharing Adjustor
 - Small potential for gaming the forecast?
- Loads are forecasted in base rate adjustments, impact of expected sales increase are captured and flowed to customer

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

2) Earnings Sharing Adjustment

- A band of authorized return on equity (“ROE”) is set for a specific period
 - No rate adjustments if actual earnings within range equal to X basis points above/below the Board approved ROE
 - 50/50 sharing between X and X+Y basis points below the target return (asymmetrical to favor customers)
- It will return to (or collect from) customers earnings outside of certain limits
 - E.g. if sales growth increases revenues and the Company’s earnings exceed the “Earnings Sharing Band”, excess is returned to customers.
- Utility allowed to keep or share in returns that fall within certain bandwidth

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Earnings Sharing Example

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

3) Power Adjustor

- Power (energy and capacity) costs are separately identified on bill
 - Pricing transparency – pay actual cost of energy and capacity
- Limits possible changes in earnings due to sales variations
 - Adjusts base rates to reflect differences between actual power costs/revenues and those included in rates

USAID
FROM THE AMERICAN PEOPLE

National
Association of
Regulatory
Utility
Commissioners

Summary

- Vermont has a number of mechanisms that have been successful to deliver effective, efficient energy efficiency programs
- Third-party deliver of programs is one effective mechanism to deliver savings
- Program structure should ensure:
 - Accountability and Oversight
 - Administrator Effectiveness
 - Compatibility with Public Policy Goals
 - Effective and Efficient use of Ratepayer dollars
