

# Session One:

## Recent Regulatory Developments

*Philip D. Moeller*  
*Commissioner*  
*Federal Energy Regulatory Commission*

# My Personal Opinions

---

- ⇒ My remarks today may not represent the official views of the Federal Energy Regulatory Commission (FERC), nor do they necessarily represent the views of any other Commissioners.
- ⇒ The Commission acts by issuance of formal orders which impact individual energy companies, and the energy industry generally.
- ⇒ When asked by the United States Congress, the Commission will provide its views on legislative initiatives under consideration.

# Legislation for the FERC and CFTC

---

- ➔ Progress has been made between the FERC and the Commodity Futures Trading Commission (CFTC) toward reaching agreement on jurisdictional lines of regulation.
- ➔ Recent legislation addresses the relationship between the FERC and the CFTC in regard to regulation of energy trading.

# Continuing Regulation by FERC and CFTC

---

- ⇒ As the new legislative requirements are implemented, both the FERC and CFTC continue to act within their existing authority over energy trading.
- ⇒ The FERC has begun a “proposed” rulemaking process pertaining to credit requirements in organized wholesale markets.
- ⇒ CFTC has likewise proposed new regulations that would impose limits on certain energy trading.

# Other Developments

---

- The FERC is active in all aspects of energy regulation.
- Highlights include: (1) the integration of renewable energy, (2) development of long-distance transmission lines, (3) construction of natural gas infrastructure, (4) encouragement of new hydro-electric resources, and (5) continuing regulation of oil pipelines.
