

NARUC
National Association of Regulatory
Utility Commissioners

Advanced Nuclear State Collaborative Partners

Thank you for your interest in the NARUC-NASEO Advanced Nuclear State Collaborative (ANSC). The ANSC convenes state utility regulators, State Energy Officials, and invited experts to exchange questions, needs, and challenges relating to the planning and deployment of new advanced nuclear generation. ANSC participants share information on the regulatory, policy, and programmatic steps needed to facilitate deployment and work with peers across different states.

At this time, ANSC membership is limited to state members and there will be several states-only peer sharing calls on key advanced nuclear priorities that will be closed to the public. NARUC and NASEO recognize the value of engaging with and hearing from private sector, industry, environmental organizations, and other partners throughout this process, and, as such, there will be opportunities for these groups to participate in select events and meetings. NARUC and NASEO will be organizing a series of educational webinars on key nuclear-related topics for ANSC participants which will feature outside experts and be open to the public. There will also be a bimonthly newsletter distributed to ANSC members that will provide updates on key federal, state, local, and private sector activity around advanced nuclear deployment.

To request to be added to the ANSC partners email distribution list, please email kkline@naruc.org with your name, email, and organization.
